Abstract

It is known that self-complementary 3-uniform hypergraphs on $n$ vertices exist if and only if $n$ is congruent to 0, 1 or 2 modulo 4. In this paper we define an almost self-complementary 3-uniform hypergraph on $n$ vertices and prove that it exists if and only if $n$ is congruent to 3 modulo 4. The structure of corresponding complementing permutation is also analyzed. Further, we prove that there does not exist a regular almost self-complementary 3-uniform hypergraph on $n$ vertices where $n$ is congruent to 3 modulo 4, and it is proved that there exist a quasi regular almost self-complementary 3-uniform hypergraph on $n$ vertices where $n$ is congruent to 3 modulo 4.

Keywords: uniform hypergraph, self-complementary hypergraph, almost complete 3-uniform hypergraph, almost self-complementary hypergraph, quasi regular hypergraph.

2010 Mathematics Subject Classification: 05C65.
