Abstract

For two graphs G_1 and G_2 , the *Ramsey number* $R(G_1, G_2)$ is the smallest integer N , such that for any graph on N vertices, either G contains G_1 or G contains G_2 . Let S_n be a star of order n and W_m be a wheel of order $m + 1$. In this paper, we will show $R(W_n, S_n) \leq 5n/2 - 1$, where $n \geq 6$ is even. Also, by using this theorem, we conclude that $R(W_n, S_n) = 5n/2 - 2$ or $5n/2 - 1$, for $n \geq 6$ and even. Finally, we prove that for sufficiently large even n we have $R(W_n, S_n) = 5n/2 - 2$.

Keywords: Ramsey number, star, wheel, weakly pancyclic.

2010 Mathematics Subject Classification: 05C55, 05D10.
