Abstract

We provide a short proof of a conjecture of Davila and Kenter concerning a lower bound on the zero forcing number $Z(G)$ of a graph $G$. More specifically, we show that $Z(G) \geq (g-2)(\delta-2) + 2$ for every graph $G$ of girth $g$ at least 3 and minimum degree $\delta$ at least 2.

Keywords: zero forcing, girth, Moore bound.

2010 Mathematics Subject Classification: 05C69.
